For the presentation, be ready to present the following ideas:

1- What is your purpose?
2- What did you already know?
3- Define any important definitions.
4- What is your manipulated variable?
5- What is your responding variable?
6- What are your constants?
7- What is your operational definition of what you are measuring?
8- What is your control group?
9- What did you find out?
10- Was your hypothesis accepted or rejected?
11- How do you know this?
12- What did you learn?
13- How does your experiment help us understand the real world?
14- What would you change if you did the experiment again?
